2021 Outlook Theme #2, 3/31/21 Update: Dry Powder versus Powder Keg

**Benjamin B. Wallace, CFA – Portfolio
Manager, Research Director**

The second theme for 2021 also featured prominently in Q1 market commentary: there is considerable pent up energy in the economy thanks to the combination of record stimulus and restricted spending.

During Q1'21, even as the vaccine recovery trends were running faster, fiscal stimulus continued accelerating, and building up the potential to be unleashed.

This chart highlights that the fiscal boost is not over. It shows year over year change in nominal GDP, on a rolling twelve-month basis. The two stimulus packages in the 2008 to 2009 Global Financial Crisis, of \$170b and \$787b, can be seen relative to that recession. The scale of the 2020 and 2021 actions are obvious, as they dwarf the earlier programs. The initial responses in March and April of 2020 totaled \$2.2 trillion, and those helped to drive the excess savings spike in Q2'20. But the economic data is going to get another boost in Q1'21 and Q2 '21. First, the \$900b CARES Act 2 was passed on 12/26/20, so came into effect in Q1'21.

The next chart shows year over year GDP growth and Excess Savings. Excess savings is savings (Personal Income – Personal Spending), minus the 5 year average savings rate, divided by total GDP. As discussed on 12/31/20 the chart clearly highlights how with *the combination of the CARES Act stimulus and restrictions on spending, savings exploded to a record high of 18.7% of GDP versus prior peaks of 2-3%. It was not only a record, but was more than six times the prior record. This matters because saved income does not get spent, and thus does not appear in GDP. It does, however, represent future POTENTIAL spending. Much of this is dry powder that consumers will put to work when certain economic activity becomes possible again.*

The record excess savings spike was the result of just the first of the three stimulus packages in the first chart. While quarterly GDP data is not yet available, January's Personal Income and Spending report showed the savings rate spiked to 20%, suggesting another excess savings boost occurred from its \$160b payments (\$600 checks). And before this program can be fully assessed, the \$1.9 trillion American Rescue Plan was passed on 3/11/21. Its impact will be primarily felt in Q2'21, including another \$410b coming from \$1,400 checks.

As noted on 12/31/20, there is considerable stored up energy. Keeping your powder dry is in reference to gun powder, a chemical combination noted for its ability to both store considerable energy and to release it quickly. The question for 2021, is if the pent up energy in the economy can be released in a controlled, productive manner, or if it will cause a potentially damaging explosion. Will it function as Dry Powder or a Powder Keg? The outcome will determine the nature of the recovery.

Even as the vaccine roll out is progressing rapidly, allowing the economy to recover, Q2'21 will see an added boost from the two added rounds of stimulus. This sets the stage for a powerful surge in the second half of 2021. The stronger the recovery, the sooner the focus will turn to how long the Fed will keep up its \$120b per month pace of QE purchases. Given the speed of this cycle relative to prior recessions, especially with the aforementioned excess savings, it is likely the

Fed will have to consider its policy stance earlier than expected, in order for it to proceed in a controlled, not explosive, manner.
