2023 Outlook Theme #1: Investors Shouldn't Lose Focus Because of Market Concentration

Benjamin B. Wallace, CFA - Chief Market Strategist

2023 has seen an equity market recovery after a challenging 2022, at least when looking at the S&P 500's 17% ytd return. Beyond the S&P 500, returns are not as robust. The crux of the issue is most evident when comparing the Tech rich NASDAQ (+32% ytd) to the Dow Jones (+5%). It's not just the case of technology stocks outperforming, but rather that a small group of seven megacap stocks in Technology (Apple, Microsoft and Nvidia), Communications (Alphabet and Meta), and Discretionary (Amazon and Tesla) have driven the majority of market returns. Combined, these 7 stocks are over 27% of the S&P 500's market cap, led by Apple and Microsoft at about 7% each. Not only are they large but, even though they are spread across sectors, they have the common driver of technology in general and excitement over the prospect of AI (artificial intelligence). And thanks to this investor enthusiasm, the seven stock group carries an average PE of 46, compared to 19 for the S&P 500 overall, and therefore 16 for the remaining 493 stocks. These are, without question, excellent companies. But their impact on the market is exaggerated to the point of distorting the overall market.

S&P 500 minus S&P Equal Weight, Rolling 6 Month Relative Returns

Chart 1

This concentrated market is evident by comparing the S&P 500 (which is capitalization weighted) to the Equal Weight S&P 500 (with the same members, but each has an equal 0.2% contribution). Looking at rolling 6 month returns in the chart to the left, the current gap has reached 10% for only the third time since 1992. The prior instances, which happened in March '00 and August '20, offer some insight going forward.

March '00 was the peak of the dotcom market, paired with a bubble in large cap stocks. The narrow market not only preceded a tech stock decline, but also a 10-year period of retrenchment for the S&P 500 (it did not surpass its March '00 high until 2007 briefly, then finally in 2013), known at the time as a “lost decade” for large cap US stocks.

The August '20 narrow market was again led by tech stocks, though this time it was the “stay at home” winners from the early Covid stock market recovery. Unlike March '00, this did not precede a major market decline. Rather growing optimism of a vaccine-driven recovery spurred a larger, but broader, stock market rally.

What can we learn? Narrow markets do not necessarily mean “bad times are coming”, as the 2020 experience showed. But what they do mean is “be careful chasing the narrow market drivers”. In 2020 tech stocks (especially the “disruptive tech ARK stocks”) led the way but then lagged the broader market in 2021 and 2022. After March '00, the NASDAQ declined over 70%. Also, while 2000 to 2010 was a lost decade for large cap US stocks, international and small cap stocks outperformed.

The biggest lesson in a narrow market is not to chase the small group of outperformers, but to stay diversified and on plan. This is evident in the chart, as both periods saw a major reversal, with the Equal Weight S&P enjoying subsequent outperformance of 20% (2/28/01, 11 mo after the peak) and 12% (7 mo after the peak, on 3/31/21). This is why *Investors Shouldn't Lose Focus Because of Market Concentration*.

IMPORTANT DISCLOSURES:
