

11.17.25 | BITCOIN DIARIES

## Bitcoin Diaries: 11/14/25

- The bitcoin Accumulation Program is a process attempting to assess and communicate the attractiveness of bitcoin's price. Basically, we are trying to determine good times to buy or add positions in bitcoin and to help understand what is happening with the price of bitcoin on a weekly basis.
- The goal of this approach is to help make investors feel more comfortable with a long-term perspective when approaching a very volatile asset by providing a logic-based accumulation approach. Read last week's analysis [here](#), and for more overall information on our bitcoin Accumulation Program, watch our overview video [here](#).

### WHAT THE INDICATORS ARE TELLING US THIS WEEK

- Distribution Range: bitcoin has violated the low end of the range
- RSI: RSI (top study, blue line) is at 32, approaching oversold conditions
- Trend: The Trend Score (bottom study, yellow) has turned negative
- Cycle: Signaling a potential bottom (middle study, green line)

Chart of bitcoin (\$BTC) produced by Kevin Grimes

**Conclusion:** Last week we concluded that while the Cycle indicates that a bottoming process could be occurring and RSI is nearly at oversold readings, the trend for bitcoin is pointing lower. This remains the case this week and has accelerated as trends continue downward. It remains the case that considering the lower end of the distribution range has been violated, as has the 200 day moving average (purple line in main chart), it is time for bitcoin to turn now or face lower prices.

**Scenario 1:** Prices proceed lower and we await a better entry point.

**Scenario 2:** Continue to watch for a turn here as an opportunity to add positions in bitcoin. The good news is that we are at the lowest levels since May.

**OVERALL SCORE (1 - 7 Scale): 3 // Risk aversion favored – wait for better opportunity**

### IMPORTANT DISCLOSURES:

This Cryptocurrency article is for informational purposes only. Past performance is not indicative of future results. Crypto is a digital currency that can be used to buy goods and services but uses an online ledger with strong cryptography (i.e., a method of protecting information and communications with codes) to secure online transactions. Unlike conventional currencies issued by a monetary authority, cryptocurrencies are generally not controlled or regulated, and their price is determined by the supply and demand of their market. Cryptocurrency is currently considered to be a speculative investment. **Please Note:** Investment in cryptocurrencies is subject to the potential for **liquidity constraints, extreme price volatility and complete loss of principal**. Moreover, you should not assume that any discussion or information contained in this document serves as the receipt of, or as a substitute for, personalized investment advice from Grimes. A copy of our current written disclosure Brochure discussing our advisory services and fees is available upon request or at [www.grimesco.com](http://www.grimesco.com).
