Bitcoin Diaries: 3/6/26

As a reminder, the bitcoin Accumulation Program is a process attempting to assess and communicate the attractiveness of bitcoin's price. Basically, we are trying to determine good times to buy or add positions in bitcoin and to help understand what is happening with the price of bitcoin on a weekly basis.

The goal of this approach is to help make investors feel more comfortable with a long-term perspective when approaching a very volatile asset by providing a logic-based accumulation approach. Read our last analysis from last week [here](#), and for more overall information on our bitcoin Accumulation Program, watch our overview video [here](#).

WHAT THE INDICATORS ARE TELLING US THIS WEEK

- RSI: RSI (top study, blue line) back to neutral from oversold territory (RSI < 30)
- Trend: The Trend Score (middle study, yellow) is negative
- Cycle: Recently signaled a potential bottoming process (bottom study, green line)
- Distribution Range: bitcoin is clearly out of the multi-year uptrend defined by the range
- Retracement Ratios: Bitcoin has retraced over 50% of the advance from early 2023 to October 2025. Ratio analysis suggests support at 57,460 which is a 61.8% retracement

Chart of bitcoin (\$BTC) produced by Kevin Grimes

Conclusion: Bitcoin is currently 45% below the October all-time high. Trends are very weak. The positive news is that there is evidence that a bottoming is in process. RSI signaled an oversold condition in early February with bitcoin hitting its cycle lows on 2/4/2026. Cycle bottoming signals (bottom study) fired in late February. The Cycle signal is predictive and we need to let it play out, but this is an encouraging sign after a sharp decline for bitcoin. After poking above the 50% retracement level earlier this week (green arrow) we are moving the score to positive territory with a 5 rating as a tentative buy level. There is a reasonable probability for recovery from this set-up and considering the decline we feel that now is a reasonable time for long-term investors in bitcoin to add a position.

OVERALL SCORE (1 - 7 Scale): 5 // Positive

IMPORTANT DISCLOSURES:

This Cryptocurrency article is for informational purposes only. Past performance is not indicative of future results. Crypto is a digital currency that can be used to buy goods and services but uses an online ledger with strong cryptography (i.e., a method of protecting information and communications with codes) to secure online transactions. Unlike conventional currencies issued by a monetary authority, cryptocurrencies are generally not controlled or regulated, and their price is determined by the supply and demand of their market. Cryptocurrency is currently considered to be a speculative investment. **Please Note:** Investment in cryptocurrencies is subject to the potential for **liquidity constraints, extreme price volatility and complete loss of principal**.
