Bitcoin Diaries: 4/17/26

As a reminder, the bitcoin Accumulation Program is a process attempting to assess and communicate the attractiveness of bitcoin's price. Basically, we are trying to determine good times to buy or add positions in bitcoin and to help understand what is happening with the price of bitcoin on a weekly basis.

The goal of this approach is to help make investors feel more comfortable with a long-term perspective when approaching a very volatile asset by providing a logic-based accumulation approach. Read our last analysis [here](#), and for more overall information on our bitcoin Accumulation Program, watch our overview video [here](#).

WHAT THE INDICATORS ARE TELLING US THIS WEEK

- RSI: RSI (top study, blue line) in bullish territory, on the verge of overbought
- Trend: The Trend Score (middle study, yellow) has turned positive today
- Cycle: Signaled a potential bottoming process earlier this year (bottom study, green line)
- Distribution Range: bitcoin has broken above the downward distribution range from last October
- New Highs: bitcoin has established a higher high, rising above the \$74,716 level from 3/17

Chart of bitcoin (\$BTC) produced by Kevin Grimes

Conclusion: This is a bullish event. Bitcoin has not only broken out of the downward range that it has been in for the past seven months, but it has set a new higher high in this bottoming process, having closed above the March 17th high when we moved bitcoin to a positive overall score. The Trend Score has turned positive today, adding conviction. Perhaps bitcoin may be entering overbought territory in the short term with RSI levels approaching 70, but the weight of the evidence supports moving \$BTC to an overall score of 6 on our scale of 1-7.

OVERALL SCORE (1 – 7 Scale): 6 // Positive

IMPORTANT DISCLOSURES:

This Cryptocurrency article is for informational purposes only. Past performance is not indicative of future results. Crypto is a digital currency that can be used to buy goods and services but uses an online ledger with strong cryptography (i.e., a method of protecting information and communications with codes) to secure online transactions. Unlike conventional currencies issued by a monetary authority, cryptocurrencies are generally not controlled or regulated, and their price is determined by the supply and demand of their market. Cryptocurrency is currently considered to be a speculative investment. **Please Note:** Investment in cryptocurrencies is subject to the potential for **liquidity constraints, extreme price volatility and complete loss of principal**. Moreover, you should not assume that any discussion or information contained in this document serves as the receipt of, or as a substitute for, personalized investment advice from Grimes.
